During the past 2 weeks I have requested at least 4 times that Dr. Francis provide me with an abstract and additional information about his presentation at the Brighton meeting next week. I do not have anything except a rough draft of an abstract which I obtained from Ms. Francis this morning. I obtained this abstract by calling Ms. Francis and asking her to agree to type out a handwritten draft of the abstract which she had in her possession. Therefore, I have been unable to clear this presentation with the Zairian government. According to the draft abstract, data may be presented on seroprevalence of HTLV-III in several categories of medical illnesses. This information has not been cleared. In addition, a statement is made that the normal population of HTLV-III antibody prevalence is four percent. I don't know where this data comes from and it is at variance with data thusfar presented to the Zairian government. Therefore, unless some discussion can be held I would consider any presentation of population data to be in violation of our agreement with the Zairian government.
